Open labs provide spaces for interaction across organizational boundaries. They...

About

I am analytical, tactical and technically-minded professional with in manufacturing engineering, project management, product development, documenting, parts measuring and quality control. I also provide detailed reporting on quality control issues.

I set up the metrology for parts and a strong believer in Quality by Design (QbD) that:

- quality should be designed and built into a product
- more testing doesn't necessarily increase the quality of the product. It can often have the opposite effect
- most quality crises and problems relate to the way in which a product was designed in the first place

Love reading biographies and learning from other experiences, and get through at least 2 audiobooks a week, listening mostly while out with my dog or at the gym.
